

Assignment 4.4 Predicates

Instructions

Using the provided starter code, complete the following:

1. Create a one-dimensional 5 element array
2. Create a function called `get_value()` that accepts two arguments: an array index placeholder and a filterable value
 - See page 154 of the courses textbook (`filter()` function)
3. Take a screenshot of the application running in VS Code

Expected Output

Display the original unsorted array

- Sort and display the array
- Invoke the `filter()` method using the `get_value()` function and output the results

GitHub

Stage, commit, and push your work to GitHub.

Deliverables

- Link to your GitHub repository
- `<yourLastName>-<assignmentName>.js`
- Screenshot of the application running in VS Code
